

Employee Stability & Attrition Analysis

Group 08

| Problem

- The organization is experiencing employee attrition that leads to talent loss, productivity decline, and increased hiring costs.
- Management currently lacks a clear view of who is leaving, why they leave, and which employee groups are most at risk.
- This dashboard aims to analyze employee attrition patterns based on demographic, job-related, and workplace factors to support strategic HR decision-making.

About Data Set

Dataset Source

- **Dataset:** IBM HR Analytics – Employee Attrition Dataset
- **Source Platform:** Kaggle
- **Domain:** Human Resource Management
- **Total Records:** 1,470 employees
- **Total Features:** 35 variables

Data Preparation

- **Checked and confirmed no missing values**
- **Created calculated measure columns to support analysis :** Total Employees , Active Employees , Attrition Count , Attrition Rate (%) , Average Monthly Income , Average Job Satisfaction
- **Transformed categorical variables for better interpretation**

Job Satisfaction

- 1 = Low
- 2 = Medium
- 3 = High
- 4 = Very High

Work-Life Balance

- 1 = Bad
- 2 = Good
- 3 = Better
- 4 = Best

Education

- 1 = Below College'
- 2 = College
- 3 = Bachelor
- 4 = Master
- 5 = Doctor

Key Insights

- **Attrition is concentrated in the early years of employment:**

New employees leave more in the first few years, showing onboarding and early support are critical.

- **Research and Development and Sales are the most vulnerable departments:**

These departments have the highest attrition, making them priority areas.

- **Sales Executives and Research Scientists are high-risk roles:**

These roles show higher attrition with large headcounts, increasing business impact.

- **Low job satisfaction strongly drives attrition:**

Employees with low satisfaction levels leave at much higher rates, showing satisfaction is a key retention factor.

- **Poor work–life balance and overtime increase attrition:**

Employees experiencing poor work–life balance and frequent overtime are more likely to leave due to workload pressure and burnout.

- **Younger and lower-income employees are more likely to leave:**

Attrition is higher among early-career employees with lower monthly income, pointing to pay and growth expectations.
